PRESTASHOP
The Best E-Commerce Experience

Manual installation steps

1. Copy files from zip file to YOUR_SITE_FILES/modules/samedaycourier or upload module zip file using standard prestashop procedure
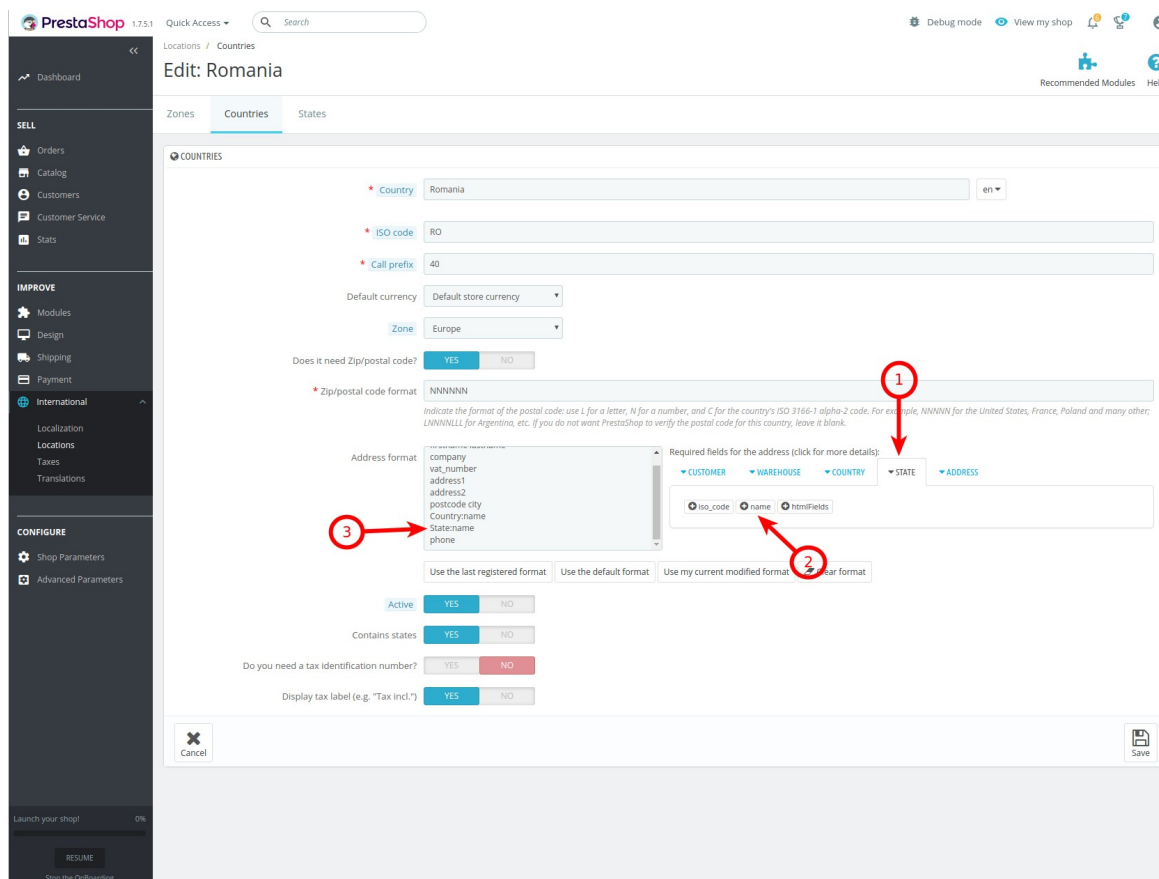

2. Install module

Prerequisites

In order for the module to works, you need to import romanian counties and require the field for the shipping address. In order to do so you should navigate to **International > Localization** menu, select **Romania**, check **States** (as counties) and import the localization pack.

After importing the localization pack, you should require the **State:name** for Romania. In order to do so you should navigate to **International > Locations** menu, select **Countries** tab and edit Romania.
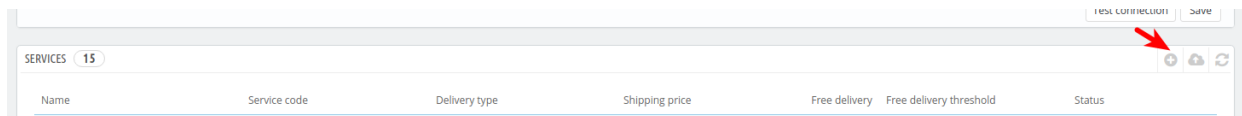

Final step is to require **State:name** in address format by selecting **STATE** tab.

Configuration

1. Set module configuration settings

   - **Production mode** – use module in production or test mode. This implies different API endpoint connection

   - **User** – API username

   - **Password** – API password

   - **AWB format** – format to be used when downloading AWBs. Available formats are A4 and A6

   - **Use estimated cost** – enable this option in order to ignore costs specified per services and use API calls to determine cost per AWB

   - **Delivery method enabled** – you can disable or enable the delivery method without uninstalling the module

2. Test connection with **Test connection** button

3. Save settings using **Save** button. Once you do this, the pickup points defined in Sameday Courier platform will be automatically imported for selected configuration (production or development)

4. Import services defined in Sameday Courier platform for selected configuration (production or development) using the **Import services** button on services list

5. Edit services available services

   - **Name** – name to be displayed on checkout page

   - **Price** – price per delivery service

   - **Free delivery** – enable this option in order to support free delivery

   - **Free shipping amount threshold** – value or order above which the delivery is free (only if Free delivery is enabled)

   - **Status** – status of service

     - **Disabled** – the service is disabled

     - **Always** – the service is always enabled

     - **Interval** – the service is enabled only in given days and interval

6. Update carriers in prestashop platform using the **Update carriers** button on services list

7. Check shipping carriers using **Shipping > Carriers** menu

Usage

Once a new order is placed, in the admin section of the order a new button will be displayed **Add AWB**. This button will open a popup to create an AWB for the order. The package weight is mandatory. The popup will list all available pickup points
